Company Background

Founded in 2017, Micronet began by helping customers connect, secure and maintain their technology. We have grown into a Maldives-based technology company building business software and digital services alongside dependable IT infrastructure and local support.

2017 Established	MALDIVES Locally Operated	END-TO-END Design to Support	MULTI-DISCIPLINE IT + Technical
----------------------------	-------------------------------------	--	---

Our Approach

We listen first, map the real requirement, then recommend a solution that fits the business. Our team can take a project from planning and development through launch, staff handover and ongoing support.

Because we also run operational businesses, we understand the everyday details behind useful software: clear workflows, accurate records, helpful reporting and systems people can learn quickly.

Vision	To become one of the Maldives' most dependable technology and technical solutions partners, helping businesses operate smarter through reliable infrastructure, software and support.
Mission	To deliver practical, affordable and professionally implemented technology solutions backed by responsive local support.

Technology & Digital Solutions

From business software to the infrastructure that keeps it connected, we build and support practical solutions.

Websites & Applications	Company websites, customer portals, booking experiences and custom business systems.
Business Software	POS, inventory, HR, workforce, reporting and workflow management solutions.
IT Infrastructure	Networks, Wi-Fi, structured cabling, switching, routing and infrastructure upgrades.
Security & Communications	CCTV, IP PBX, SIP connections, extensions and call routing.
Consulting & Support	Requirement discovery, practical recommendations, deployment, training and ongoing assistance.

Products & Selected Projects

MicroPOS	Retail point-of-sale and operations software used by Island Thrift and Moscow Traders in Himmafushi.
HR Software	Employee records, attendance, leave and workforce administration in one organised system.
Travel Booking	Online booking and service discovery, including the Himmafushi.net project.
EasyFix	A service platform connecting customer requests with scheduling and business operations.

Built Around Your Operation

Every organisation has its own people, processes and priorities. We shape the scope to fit the environment and give teams a clear path from first conversation to a supported, working solution.

• Hotels & Resorts / Guesthouses
• Corporate Offices
• Retail Stores
• Restaurants & Cafés
• Healthcare Facilities
• Educational Institutions
• Residential Properties

How a Project Moves

01 DISCOVER	Site requirement, objectives and constraints
02 DESIGN	Architecture, equipment and implementation plan
03 DEPLOY	Installation, configuration and integration
04 VERIFY	Testing, commissioning and handover
05 SUPPORT	Maintenance, troubleshooting and future expansion

Why Micronet

We aim to make technical projects easier to understand, easier to maintain and easier to support.

Designed Around You	We start with your goals and workflows, then shape the system around what your team needs.
Built for Local Business	We understand the operating conditions, connectivity and practical needs of businesses in the Maldives.
One Delivery Partner	Work with one team from early planning through development, deployment, training and support.
Room to Grow	We favour maintainable solutions that can adapt as your business, staff and customer needs change.

Leadership

Our leadership combines telecommunications and infrastructure experience with software engineering and hands-on business operations.

HUSSAIN MUNAAD Co-Founder / Managing Director	Hussain Munaad is an entrepreneur and technology professional with experience across telecommunications, networking, IT infrastructure, technical services and business operations. Before focusing full-time on his businesses, he spent approximately four years with Ooredoo Maldives, gaining experience within the telecommunications industry and professional technology and service environments. At Micronet, he leads business development, technology projects, client relationships and overall growth strategy.
AHMED DHAHUGAN Co-Founder / Director - Software & Technology	Ahmed Dhahugan is a software development professional and technology entrepreneur with a Bachelor's Degree in Software Development. He contributes to Micronet's software engineering and digital solutions capabilities, focusing on systems that solve practical business requirements. His software development background complements Micronet's infrastructure expertise and supports projects involving web applications, database-driven systems, business process digitalisation and customised technology solutions.

A Broader Technical Ecosystem

Alongside our core technology work, Micronet operates specialist service brands. That experience keeps our software and IT solutions grounded in real day-to-day operations.

IT / Networking / CCTV / Software	The core technology business, established in 2017.
Air Conditioning	Installation, servicing, repair and cooling support.
Motorcycle Services	Servicing, diagnostics, repair and roadside support.
Property Maintenance	Handyman, plumbing, electrical and everyday repair services.

The result is a team that understands how technology, people and daily operations fit together - and can help improve each part.

Your next idea starts here.

Tell us what your business needs to do better. We can help define the requirement and build a website, booking platform, POS, HR system, custom application or IT solution to move it forward.
